

DBMS_Assignment 4 _PCA2_1_2026

1: Create a View from Single Table

Create a view **EmployeeSalary** that shows **EmpID, EmpName and Salary** from the Employee table.

2. Display Data from View

Retrieve all records from **EmployeeSalary**.

3: Create View with Condition

Create a view **HighSalaryEmp** showing employees whose salary is greater than 55000.

4: Update Data through View

Increase the salary of **Ananya** to 65000 using the view **EmployeeSalary**.

5: Insert Data through View

Insert a new employee using the view **EmployeeSalary**.

6. Delete Data through View

Delete employee **Vikram(example)** from the view. (Check to see the changes in the Base table.)

7. Create View Using Two Tables

Create a view **EmployeeDeptView** showing **EmpName and DeptName**.

8: Display Data from Multi-Table View

9: Modify Base Table and Observe View Change

Update salary of **Rahul** in Employee table.

10. Drop the View.
